

RENOVATION OF VACUUM HEATING CHAMBERS

In addition to the delivery of graphite replacement parts, **AVION** offers a range of services e.g.:

- Lining of vacuum heating chambers
- Delivery, installation and commissioning of heating elements
- Modernisation of furnace controls

The selection of the graphite parts is made in accordance with your specifications or the suggestions of our specialist staff.

Thanks to reduced administration, **AVION** can offer its services at an excellent quality standard and more price efficient than a furnace construction company.

Our assembly staff is familiar with the heating chambers of a very varied range of furnace construction companies and furnace types.

You will receive from us a complete offer including all the graphite plates and molybdenum parts or, on request, for the work only if you order the replacement parts and components separately.

The appropriate modernisation of the control is part of our service range as is the handover of the corresponding testing logs before approval testing.
